Summary

Backend Developer with 7 years of experience building performant and scalable web applications using Python, Typescript, Golang, and Java. Collaborated with cross-functional teams of up to 15 developers to successfully deliver projects with budgets ranging from $100k to $1 million. Led the development of a microservice-based architecture that increased the number of API calls handled per second by 50%.

Skills

Python | Django | FastAPI | Typescript | Golang | Java | OOP | TDD | UML | SOLID | CI/CD | GIT | Microservices | MongoDB | PostgreSQL | SQLite | Docker | Nginx | Unit Test | Agile | Scrum | React | Gitlab (CI) | Google Cloud Platform (GCP) | Redis | Kubernetes | Linux | MCP | n8n | Prompt Engineering | AI-Assisted Developmen | Algorithmic Trading Bots

Professional Experience

Backend Developer - Geevex

2023 – 2026 | Tehran, Iran

- Led an AI-first backend team in scaling a full crypto exchange platform, building on a microservice architecture with Python, Django and FastAPI.
- Built and maintained AI and algorithmic trading bots that ran alongside the core exchange systems.
- Developed ML-based fraud detection and risk scoring to flag suspicious accounts and transactions.
- Shipped LLM-powered product features using LLM APIs and automated internal workflows with AI agents and n8n.
- Made AI coding tools part of how the team worked every day, which shortened delivery cycles while keeping the code quality high.
- Overhauled the whole codebase over three years, which made the exchange and bot systems much more stable, cut production incidents and lowered API latency.
- Mentored 5+ engineers through code reviews and one-on-ones, helping them grow into more senior roles.

Backend Developer - Ireen GMBH

12/2021 – 02/2023 | Vienna, Austria

Mongo, FastAPI(microservice), Google Cloud, Vue

- Revamped the current microservice system and achieved massive 60% improvement in reducing development and maintenance costs.
- Implemented automated pipelines using unit tests, end-to-end (E2E) tests, and performance tests, resulting in a 50% reduction in production downtimes.
- Collaborated with other backend developers to document APIs, resulting in a streamlined onboarding process for new team members, reducing the expected duration from 20 to 14 days.

Backend Developer - Rayan Negar

07/2021 – 12/2021 | Tehran, Iran

Postgres, SQLite, Django, AzureDevops, Angular

- Facilitated the hiring and onboarding of experienced developers onto the project, resulting in a 40% increase in productivity and expanding the team's capacity in collaboration with the co-founder and HR team.
- Coordinated with project stakeholders to identify and document crucial changes and successfully managed project budgets to ensure timely delivery and optimize efficiency.

Backend Developer - Rigid Robotics

12/2020 – 07/2021 | British Columbia, Canada

Postgres, Django, AzureDevops, Angular

- Implemented a new item in the deployment pipeline to check API performance from the user perspective, resulting in the identification of more than 5 areas where performance was lacking.
- Actively pursued opportunities to learn from senior developers and the manager, applying their insights to continuously improve my work performance and skills on the project.

Projects

PrivateJet
Backend Framework

- Engineered an open-source backend framework that fully supports asynchronous programming, including an asynchronous router and middleware system.
- Collaborated with other software engineers and contributors to utilize asynchronous drivers for both SQL and NoSQL databases, allowing for efficient handling of queries.

Backend Developer - National statics center

2020 – 2020 | Tehran, Iran

Postgres, Django, On-site physical server, Angular

- Cooperated with expert team to optimize app for registering statistics, resulting in a 50% increase in registered data and successful deployment of high-quality product.

Backend Developer - NamdarGB real-state

2019 – 2020 | Tehran, Iran

Postgres, SQLite, Django

- Worked closely with a cross-functional team to implement an optimized app flow, resulting in a 20% increase in efficiency for common tasks and significant time savings for users.
